Vacuum Kerb & Stone Layer - Fork Mounted - Petrol Driven

This diverse unit is suitable for attaching to a telehandler or fork truck. A swing arm jib 4m long mounted on top of the unit can slew through 270 degrees and can be fitted with various suction plates that can lift up to 150kgs meaning that kerbs, slabs and other concrete/stone products can be laid with ease. In addition, the design of the unit leaves room for the pallet loaded with the stone products to sit on the machine's forks making for a very simple one-man operation. This unit will allow the user to lay up to 300m of kerb stones in a single day without compromising manual handling legislation.

A number of plates are available for use with this unit, please call us for details.
